

A decorative graphic on the left side of the slide consisting of two overlapping parallelograms. The front one is blue and the back one is a light green. They are positioned diagonally, with the blue one partially covering the green one.

Cyberphysical Systems with Virtual Reality and Robotics

MS ECE Final Project
August 14, 2020
Kristi Perreault

→ **Problem Statement**

Significance & Novelty

Project Design & Approach

Results & Discussion

Closing Thoughts

Problem Statement

- Explore possibility of connected world
 - Cyberphysical systems
 - Industry impact
- Project concepts
 - Human-machine interfaces
 - APIs
 - Blockchain
 - VR
 - Communication protocols
 - Authentication
 - Robotics

Problem Statement

→ **Significance & Novelty**

Project Design & Approach

Results & Discussion

Closing Thoughts

Prior Work

- EC544 CE in Connected World semester project
- 2017 Undergraduate Senior Design project
- Full-time work experience in software engineering
- Augmented Reality Monopoly game
 - 2013 Senior Design project from advisor
- Literature
 - Cyberphysical systems in deterministic models
 - UC Berkeley highlighting difficulties
 - Cyberphysical systems & electrical power
 - IEEE Digital Library

Significance & Novelty

- Using blockchain transactions to power robot
- Decentraland SDK, Ethereum, AWS, DexterOS
 - Not a common stack
- Incorporating cloud technology in cyberphysical communication
- Applications for blockchain beyond bitcoin
 - Monitoring interactions as “triggers”
- Contribution to existing literature
 - Proof of concept that is inexpensive

Problem Statement

Significance & Novelty

→ **Project Design & Approach**

Results & Discussion

Closing Thoughts

Original Project Approach

- Robot traverses VR Maze in real-time
 - Purchase and assemble robot
 - VR maze built with Decentraland SDK
 - Unity, VR Headset
- Robot rewarded with cryptocurrency when maze is solved in certain amount of time
 - Crypto wallet on a Raspberry Pi
 - Rewarded with ether
 - Blockchain & Ethereum

Modified Project Approach

- Robot moves forward when “fueled” in VR environment
 - Box in VR sends ether to robot
 - Ether “fuels” robot forward accordingly
- AWS Lambda, IoT
 - Communication with VR and robot
 - Observes blockchain transactions
 - Publishes message to topic

System Diagram

Problem Statement

Significance & Novelty

Project Design & Approach

→ **Results & Discussion**

Closing Thoughts

Physical System

- GoPiGo3
 - DexterOS
 - Basic movements
 - Motors, wheels, batteries
- Raspberry Pi 4
 - Raspbian OS
 - AWS IoT Device SDK

Virtual Reality

- Decentraland Scene
 - Button box with hover text
 - Map showing position
- Decentraland SDK
 - Written in Javascript
 - Button transaction
 - Render locally with CLI

Lambda Function

- Not in original project approach
- Included as part of the communication stack
- Written in Python, AWS Console
- Two Purposes
 - Monitor transactions on the blockchain
 - Publish message to IoT for commanding robot
- Appropriate roles, policies, permissions

Cryptocurrency & Blockchain

- Two MetaMask accounts created
 - One with ether, one without
- Infura account created
 - Interactions on blockchain
- JS Script sends ether from Account A to Account B
 - Signed transaction with Infura
 - Establish provider with Web3 JS
 - Gas, gas price, wei/ether conversion
 - Proper authentication

Discussion

- AWS Device SDK for C and Python
 - Shared library/API issues
- AWS IoT approach
 - SNS topic, python/typescript lambdas
 - AWS Greengrass vs SDKs
- Full & Light nodes
 - Not the best approach
 - Infura & MetaMask

Problem Statement

Significance & Novelty

Project Design & Approach

Results & Discussion

→ **Closing Thoughts**

Challenges & Failures

- COVID-19 Pandemic
 - Remote project & meetings
 - No access to on-campus resources
 - Personal stressors
- Time Management
- Issues with light node
- Communication Stack
 - Difficult documentation
 - Python & C
- Ether transactions

What I Learned

- GoPiGo3 and DexterOS
- AWS IoT Device SDKs
- Lambda with IoT
 - Publishing topic
 - Permissions
- Ether, Infura, MetaMask
 - Send/receive transactions
 - Blockchain
 - Gas & gas prices...

Potential Future Work

- Upgrade or customize physical system
- Add more elements to the Decentraland scene
 - Capability to receive MANA
 - Deploy LAND
- Sync/Async Lambda for transaction time
- Include more robot movements
- Different types of cryptocurrency
 - Dialog box
